Detailed Report:

→ Select start > settings > Accounts > other user (in some windows editions it may be labeled as other).

→ It may be labelled under work or school user > Add a work or school account select add account

→ enter that person's user account select the account type and then select add

→ search for command prompt right - click the top result & select the run as administrator option.

→ Enter: net user user-NAME password / Add.

Objective of the Activity Done:

→ LUSRMGR - Msc (local user & group management)

Detailed Report:

- * Local user and group management is a console for managing local users and groups in windows
- * It is a universal console and has been used in all versions of windows since windows 2000 including windows XP
- * The basic purpose of lusrmgr.msc is to assign rights to different users of groups on a computer for example, the default role includes administrator, power user, standard user, guest.
- * You can open local users and group management console by going to Run > lusrmgr.msc
